

GRAPHIC SPIRIT

Neon Text Layer Style Pack

WATCH THE DEMO

1. Install all components:
'Neon Actions.atn' (Window > Actions > Load actions)
'Neon Styles.asl' (Window > Styles > Load styles)
or just drag-n-drop in Photoshop.
2. Open one of Wall backgrounds from 'Walls' folder.
3. Download and install some fonts from the list of the second page of this guide. (Just click and download).
4. Construct a composition of text and graphics, apply styles (Window > Styles).
5. Usually neon designs have a frame, for this purpose draw a round brush with a accurate edge, and apply to it 'Frame Style'.
6. If you want to get a stroke style from graphics or text, then start one of the actions (Window > Actions).
7. If you use very thin lines or fine text in the design, turn off the "Inner Glow" in the style of the layer, otherwise, the neon will not sufficiently glow.

Thank you for purchase!
