# Install WooCommerce

## How to install WooCommerce

To do an automatic install of WooCommerce log in to your WordPress admin panel and go to: Plugins > Add New.

In the search field type “WooCommerce” and click Search Plugins. Once you’ve found the plugin you can view details about it such as the point release, rating and description. Most importantly of course, you can install it by simply clicking Install Now. After clicking that link you will be asked if you’re sure you want to install the plugin. Click “yes” and WordPress will automatically complete the installation.

More Info at: <http://docs.woothemes.com/document/installation/>

The screenshot shows the WordPress admin interface. On the left is a dark sidebar menu with options: Dashboard, Sites, Users, Themes (4), Plugins (2), Installed Plugins, Add New, Editor, Settings, Updates (6), and Collapse menu. The 'Plugins' menu item is highlighted in blue. The main content area is titled 'Install Plugins' and includes navigation links: Search, Upload, Featured, Popular, Newest, and Favorites. A descriptive paragraph states that plugins extend WordPress functionality and provides a link to upload a plugin. Below this is a search bar containing the text 'woocommerce' and a button labeled 'Search 1 plugins'. Further down, there is a section for 'Popular tags' with a note about browsing by popular tags. A list of tags is displayed, including admin, AJAX, buddypress, category, comment, comments, content, email, Facel, image, images, javascript, jquery, link, links, login, media, page, pages, pho, posts, rss, seo, shortcode, sidebar, social, spam, stats, twitter, video, and Wi.
