WPML Multilingual Translation

Theme options string variables is provided in theme root folder by file name wpml-config.xml . It requires WPML string translation plugin to translate these strings.

Installing Tamarind Theme via FTP to Wordpress

1. Download the zipped theme pack to your local computer from themeforest and extract the ZIP file contents to a folder on your local computer.

2. Using an FTP client to access your host web server.

3. Upload the Theme files in the extracted folder called 'tamarind' (its inside the extracted 'tamarind-packed') to wp-content/themes directory provided by WordPress. Please make sure you're uploading the files from the extracted tamarind zip.

4. Visit Administration > Appearance > Themes, under the Manage Themes tab, under the Available Themes, if necessary navigate to the page displaying that Theme, then click the Activate link to make the Theme, the Current Theme.
