

## Instaberg - Instagram Feed Gallery - Gutenberg Block

### Quick User Manual

**Plugin Requirements:**  
WordPress(5+)

## Step 1 - Upload and Activation

Installing the plugin is very easy, you'll see.

There are two ways to install a WordPress Plugin:

1. Directly upload the zipped plugin file via the WordPress admin
2. By uploading the unzipped plugin folder containing all the plugin files directly on your server using an FTP client.

### Option 1 - Using WordPress Installer ( recommended )

---

Log in to your WP Admin Panel and open the **Plugins** panel

Click '**Add new**' and follow the instructions

Install a plugin in .zip format

*If you have a plugin in a .zip format, you may install it by uploading it here.*

No file selected.

When asked to select a file, choose the **instaberg.zip** file

After uploading the Plugin to your server, Click '**Activate**'

## Option 2 - Installation via FTP Client Software

---

Extract the .ZIP archive from Codecanyon to a local folder on your PC. It should contain a subfolder named **instaberg.zip**

Upload unzipped instaberg folder from Plugins folder to the '/wp-content/Plugins/' directory using your favorite FTP client software

Make sure you have setup Transfer Mode - Binary, because files can be broken upon transfer with ASCII mode

Login to your WordPress admin dashboard, go to Plugins

Click '**Activate**'
